everywhere talking.

Pulse-Net® Auto-Coupling Industrial Ethernet Connectors

From real-time process control to full-time synchronization of the manufacturing process, the flow of sensitive data plays a critical role in today's automated factory environment. Industrial Ethernet applications do however present demands that standard RJ45 connectors are ill suited to handle. Mechanical stress, moisture, EMI, and a host of contaminants are typical challenges.

As simple as an RJ-45 to use, Alden Pulse-Net® connectors can be field terminated with industry standard

tools making the transformation to a fully sealed and ruggedized Ethernet connection a snap.

But what makes the PL-1300 Series truly remarkable is Alden's Pulse-Lok® auto coupling technology, which makes confirmed mating and sealing as simple as push and "click". Find out what the talk is all about. Download Pulse-Net specifications and order a FREE sample
