Alden Pulse-Lok® connectors are turning heads in the medical device industry.

That's because in addition to good looks, Alden connectors feature our signature Pulse-Lok® technology, a unique auto-latch coupling innovation that makes mating as simple as push and click. Its built-in tactile and visual confirmation lets you know a Pulse-Lok connection is securely engaged. Pulse-Lok is available in four shell sizes with densities up to 52 poles.

Pulse-Lok is suitable for a broad range of medical applications including therapy and monitoring. From rugged and reusable to low cost disposable, there is a Pulse-Lok connector solution to meet your medical device requirements.

*Pulse-Lok® connectors are available with fully integrated over-molded cable assemblies.*

*Enhanced cable-to-connector termination options available.*

At Alden, our connectors aren't the only things that look great. We bring the power of Pulse-Lok to life by engineering and manufacturing custom cable assemblies to meet the mechanical and environmental demands of any medical application.
