

# What the best instruments will be wearing this season.

Alden circular connectors are turning heads everywhere from hospitals to factory floors. That's because in addition to good looks, Alden connectors feature our signature Pulse-Lok® technology, a unique auto-latch coupling innovation that makes mating as simple as push and click. It's built-in tactile and visual confirmation lets you know a Pulse-Lok connection is securely engaged. Pulse-Lok is available in four shell sizes with densities up to 52 poles.

And our newest family member, Pulse-Net®, is an IP-67 sealed RJ-45 designed to

keep Ethernet connections secure in even the harshest environments.

At Alden, our connectors aren't the only things that look great. We bring the power of Pulse-Lok to life by engineering and manufacturing custom cable assemblies to meet the mechanical and environmental demands of any application. Want your instruments to look and perform their best? Download our complete technical specifications and **request a free Pulse-Lok sample package at [www.aldenproducts.com/plk](http://www.aldenproducts.com/plk)**. Or call us at 508-427-7000.

Pulse-Lok connectors, available with fully integrated over-molded cable assemblies, are all the rage this season.
